

THE ROLE OF GLOBAL URBANIZATION IN CLIMATE CHANGE

Arsheya Jaishiva, Amanda Eng, Emma Jee, Chloe Ling

WHAT IS URBANIZATION

Definition

The increase in the proportion of people living in towns and cities

Causes

- economic: employment opportunity
- social: modernization, welfare
- environmental: rural degradation

BACKGROUND

Economic

bottom line
cash flows

Social

Lowers the risk of
environmental-
related diseases

Environment

Conservation of
resources and
ecosystem

KEY STRATEGIES

Waste Reduction

3R (Reduce, Reuse, Recycle)

Energy Efficiency

Use energy saving devices

Water Conservation

Implement water saving technologies

AT HOME

Waste

Separate and compost

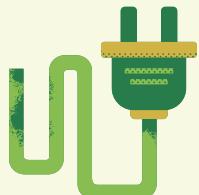

Energy

Use LED lights and turn off devices

Water

Fix leaks and use water saving showers

AT WORK

Energy

Implement
energy efficiency
systems

Waste

Set up recycling
programs

Green Policies

Reduce plastic use
and encourage
eco-friendly travel

IN TRANSPORTATION

Green Choices

Use public transport, bike,
or drive electric vehicles

Carbon Footprint

Carpool and reduce
unnecessary trips

COMMUNITY AND GOVERNMENT

Community

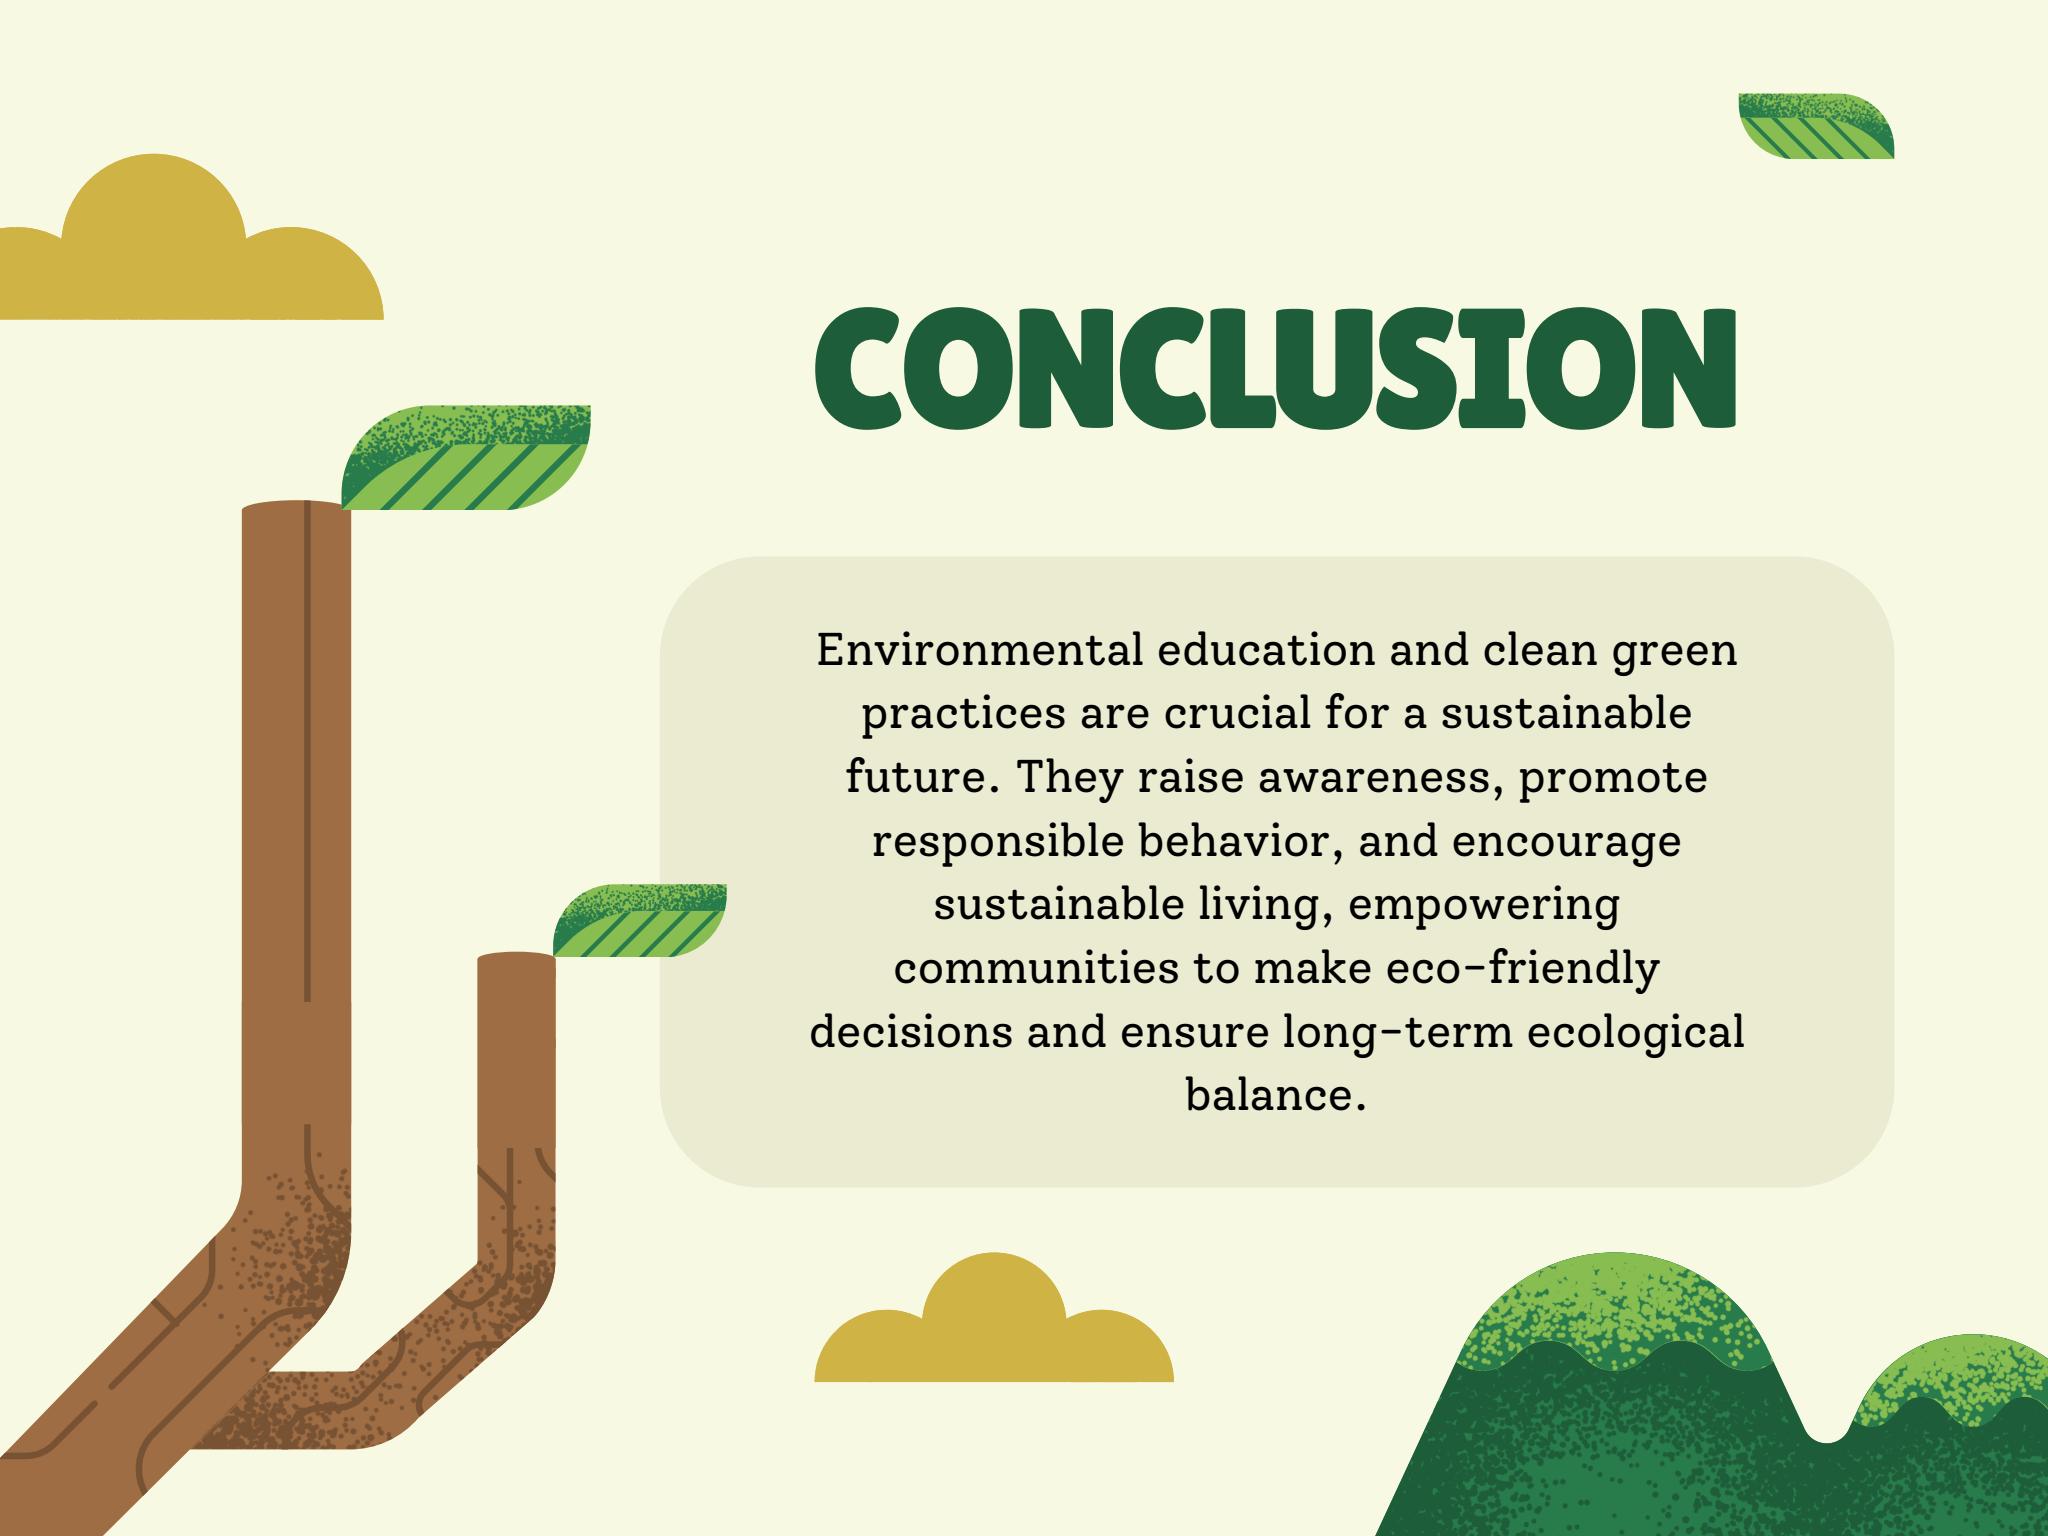

Environmental education
programs and clean-up initiatives

Government

Environmental policies
and incentives

CONCLUSION

Environmental education and clean green practices are crucial for a sustainable future. They raise awareness, promote responsible behavior, and encourage sustainable living, empowering communities to make eco-friendly decisions and ensure long-term ecological balance.

THANK YOU
